Version: 1.0 Author: Mahmut Metindoğan Email: smetindogan@gmail.com

Repository: https://github.com/1MAM2/Asp.Net_Web_Api

Framework: ASP.NET Core 8.0 Database: MySQL ORM: Entity Framework Core

Overview

Product API is a modular backend system built with ASP.NET Core. It provides ready-to-use e-commerce features including:

Product & Category Management

User Authentication & Role Management

Order Management

Payment Integration

Dashboard Data

Soft Delete & Stock Management

It can be used with any frontend: React, Vue, Angular, or plain HTML/JS.

Features Feature Description Product CRUD Add, update, delete, list products with categories & galleries Luser System Register, login, JWT-based authentication, role management Create and manage orders with status updates Payment Integration lyzipay sandbox 3D secure support JWT Auth Secure login and token validation Soft Delete Products & Users are soft deleted instead of permanent removal Optimized Queries Eager loading with EF Include for faster responses

ASP.NET Core 8

Entity Framework Core 8

MySQL

JWT Token Authentication

C# 12 / .NET 8

LINQ & Async Programming

✓ Note: MySQL database is required; DefaultConnection must point to the user's MySQL instance.

Installation Guide 1 Clone or Download git clone https://github.com/1MAM2/Asp.Net_Web_Api.git

2 Configure Database

Open appsettings.json and update:

"ConnectionStrings": { "DefaultConnection": "server=localhost;database=productdb;user=root;password=yourpassword;" } ⚠ User must create productdb database manually or via migration. 3 Apply Migrations dotnet ef database update 4 Run API dotnet run Default endpoints: HTTP: http://localhost:5039 Authentication Endpoints Method Endpoint Description POST /api/Auth/register Register new user GET /api/Auth/{id} Get user by ID GET /api/Auth/verify-email Verify email token POST /api/Auth/login Login user and get JWT token POST /api/Auth/logout Logout user POST /api/Auth/refresh-token Refresh JWT token POST /api/Auth/confirm-email Confirm user email GET /api/Auth/protectedRoute Protected route example **Category Endpoints** Method Endpoint Description GET /api/Category List all categories POST /api/Category Create category GET /api/Category/{catid}/products List products of a category GET /api/Category/{catid} Get category by ID DELETE /api/Category/{catid} Delete category PUT /api/Category/{catid} Update category Dashboard Endpoints Method Endpoint Description
